## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 - 42, drawn to an electromagnetic product having at least two coplanar magneto-resistive sensors, classified in class 324, subclass 235.
  - II. Claims 43 - 50, drawn to a method of summing electromagnetic field vectors at at least two different locations, classified in class 324, subclass 233.
  - III. Claims 51 - 99, drawn to a product for detecting flaws in electrically conductive specimens, classified in class 324, subclass 237.
2. The inventions are distinct, each from the other because of the following reasons:

Group I, II and III are distinct as they embody separate inventive concepts, each capable of supporting separate patents.
3. Because these inventions are distinct for the reasons given above and the complete search required for Group I is not required for other groups or vice versa, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2862

5. A telephone call was made to Mr. Delgado on 3/19/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
